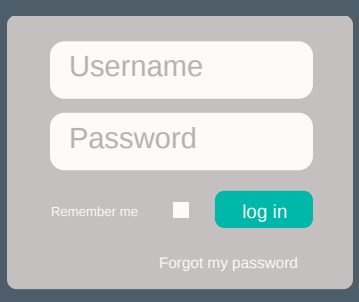
Password Quick Tips



Use a password phrase and make it relevant.

Securityreallyworks

Make it something you can visualize. It's easier to remember that way.

Make it more than 14 characters and include capitals, numbers and symbols

S3curItyr3@llyw0rks

Don't use your work password for personal sites.

Never give out your password to anyone.

Change passwords often.

Use different passwords for different websites and computers -- especially for sites with sensitive info like banking sites.

Consider using a password manager to stay organized. Password managers auto-generate and store passwords on your behalf.
